

# HEALTHCARE ASSOCIATED INFECTIONS

## Impact on The Community

Kevin T Kavanagh, MD, MS, FACS, Health Watch USA.

This presentation is the express opinion of Dr Kevin T. Kavanagh, MD, MS, FACS

### THE PROBLEM

#### HEALTHCARE ASSOCIATED INFECTIONS

1. Economic direct toll on Medicaid and State Health Insurance Premiums.
2. Risk of Spreading Infections to the Community.  
Many Community MRSA Infections are Healthcare Associated – Community Acquired.

### SIZE OF PROBLEM – CDC & AHRQ

In Hospitals alone this is the size of the problem:

- Hospital Associated Infections (HAI) affect approximately one in twenty hospitalized patients.
- Cost: 30 Billion dollars from Hospital Associated Infections.
- Nearly 100,000 deaths in the United States each year from Hospital Associated Infections.
- In Kentucky: 23,000 infections with almost 1,400 deaths at a cost of approximately \$400,000,000.  
(State Plus Private Funds)

In the Community, data is limited and much is not known.

### IMPACT OF INFECTIONS

The State Budget is a Shrinking Pie. The more that is spent on healthcare the less that is available for other agencies.

- Total State Expenditures: 28.4 Billion (2012)
- Budget for Medicaid: 6.2 Billion (2012)
- Budget Department of Education: 4.7 Billion (2012).
- Kentucky and Private Industry Cannot Afford This Epidemic.

### HEALTHCARE ACQUIRED INFECTIONS

Healthcare Acquired Infections are one of the Top Ten Causes of Death in the United States.

<http://www.cdph.ca.gov/programs/hai/pages/default.aspx>

[http://www.oregon.gov/OHA/OHPR/docs/HCAIAC/Materials/Binder\\_Materials/HCAIAC\\_Charter.pdf?ga=t](http://www.oregon.gov/OHA/OHPR/docs/HCAIAC/Materials/Binder_Materials/HCAIAC_Charter.pdf?ga=t)

Thomas R. Frieden, MD, MPH, Director of the CDC

"Evidence indicates that, with focused efforts, these once-formidable infections can be greatly reduced in number, leading to a new normal for healthcare-associated infections as rare, unacceptable events."

Source: Maximizing Infection Prevention in the Next Decade: Defining the Unacceptable. Infect Control Hosp Epidemiol 2010;31:S1–S3 <http://www.journals.uchicago.edu/doi/full/10.1086/656002>

### MANY ARE PREVENTABLE

- Central Line Infections -CLBSI – 82% Reduction. <sup>(1)</sup>
- Ventilator Associated Pneumonia -VAP – 70% Reduction. <sup>(2)</sup>
- MRSA – Cardiac Surgery, Almost Eliminated. <sup>(3)</sup>
- Patient Falls – Should be Zero.
- Pressure Ulcers – Stage III and IV should be almost zero.

## **PILLARS FOR CONTROL**

Four Pillars of Control – CDC, SHEA, APIC, IDSA

- Data for Action
- Adherence to Evidence Based Prevention Practices
- Align Incentives
- Innovation Research

Oct. 9, 2010 White Paper: Moving toward Elimination of healthcare-associated infections: A call to action.

[http://www.apic.org/Content/NavigationMenu/GovernmentAdvocacy/RegulatoryIssues/CDC/AJIC\\_Elimin.pdf](http://www.apic.org/Content/NavigationMenu/GovernmentAdvocacy/RegulatoryIssues/CDC/AJIC_Elimin.pdf)

## **DATA FOR ACTION**

"Lastly, tracking infections is key. These findings demonstrate the vital need to continue to monitor drug-resistant bacteria. If we want to stop resistant bacteria in their tracks, we have to know where to begin and how we are doing." – Dr. Arjun Srinivasan, MD, Associate Director, Division of Healthcare Quality Promotion, CDC.

Source: Medical Reports about Drug-Resistant Infections: May 29<sup>th</sup>, 2011

<http://blogs.cdc.gov/safehealthcare/?p=1450>

## **DATA FOR ACTION**

### **HEALTH DEPT. & COMMUNITY**

- To design interventions you need to know what bacteria to target and a baseline to compare the results to.
- To write grants.
- To know which bacteria to target with antibiotic development.
- To motivate the community to change behavior.
- Hand Washing.
- Cleaning public restrooms and facilities.
- For example: MRSA and C. Difficile are handled differently.

## **LIMITED DATA IS AVAILABLE**

- KY Health Dept. Only Outbreaks are Reportable
  - Only Four Outbreaks Have Been Reported by all hospitals between Oct. 2009 and Sept. 2010. No MRSA or C. Difficile Infections.
- CMS – Billing Data, Not all Events Captured.
- Research Studies Often Use Limited Surveys.
- National Healthcare Safety Network.
  - Central Line Infections in ICU.
  - Some Surgical Site Infections in 2012.

## DATA – WHAT WE KNOW

### MOST COMMON INFECTIONS

- Methicillin-resistant Staphylococcus aureus (MRSA) – Can cause skin infections. Severe cases can cause blood infections, lung infections.
- Community Associated
- Healthcare Associated (Community & Hospital onset)
- Clostridium Difficile – Spore forming bacteria which can cause a life-threatening GI infection. Very hard to kill.

## DATA – WHAT WE KNOW

### MRSA INCIDENCE

25% to 30% of all individuals carry Staph aureus (Not Necessarily MRSA).

Some studies have found up to 5% of the Community are MRSA carriers.

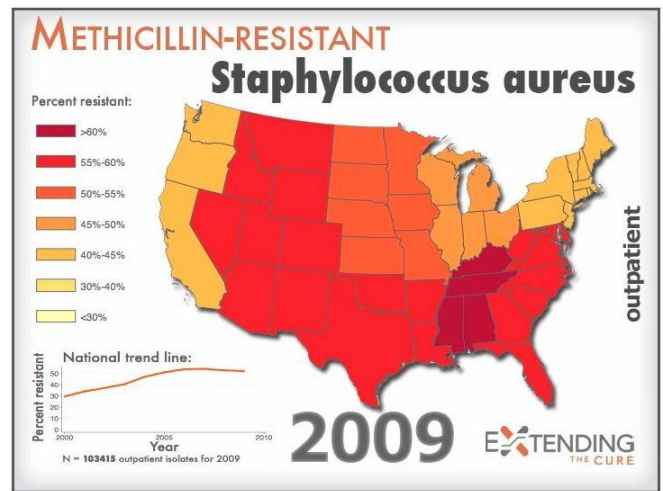

In Kentucky, it has been reported that over 60% of Outpatient Staph Cultures are MRSA Positive.

Annals of Emergency Medicine

<http://www.healthleadersmedia.com/content/QUA-261460/MRSA-Infected-5-of-ED-Patients>

Center for Disease Dynamics, Economics & Policy

<http://www.cddep.org/resistancemap/methicillin-saureus>

## DATA – WHAT WE KNOW

### MRSA IMPACT ON PATIENTS

- Most Common or Second Most Common Infection.
- Both Community Associated and Healthcare Associated MRSA are Important.
- MRSA kills about 18,000 people annually. (Infectious Diseases Society of America)
- Approximates the number that die of AIDS each year. <http://www.avert.org/usastatistics.htm>
- MRSA causes severe disability in a far greater number.

## DATA – WHAT WE KNOW

### MRSA IMPACT - SCHOOLS

- One reported outbreak in a Kentucky high school last year.
- Most common in locker rooms and involves sports.

## DATA – WHAT WE KNOW -- C. DIFF IMPACT - ?????

C. Difficile is also very common.

It has been reported that Kentucky has the 6th highest rate of C. Difficile infections in the nation at 21.8 infections per 1000 patients. <http://www.ama-assn.org/amednews/2009/images/gprca0601a.pdf>

## **PREVENTION PRACTICES**

- Clean high contact surfaces
- Illinois School System [http://www.idph.state.il.us/health/infect/MRSA\\_School\\_Recs.htm](http://www.idph.state.il.us/health/infect/MRSA_School_Recs.htm)
- Cover Sores & Wounds
- Wash Hands
- Do Not Share Personal Items (towels, razors, soap, clothing)

## **PREVENTION**

- Two of the most common Superbugs
- MRSA – Alcohol kills.
- C. Difficile – Not killed with Alcohol rubs, and Resistant to Ammonia – Forms Spores. (need Clorox Bleach). Restrooms are important.
- How Many Children in Kentucky Were Treated For C. Difficile ? -- Unknown (This is why we need reporting.)
- CDC Recommendations <http://www.cdc.gov/mrsa/prevent/schools.html>

## **ILLINOIS RECOMMENDATIONS**

Clean and disinfect environmental surfaces and athletic equipment that has been in contact with potentially infectious wound drainage, blood, or non-intact skin utilizing an EPA-registered disinfectant cleaner that meets the requirements of the Occupational Safety and Health Administration (OSHA) Bloodborne Pathogens Standard or a 1:10 dilution of household chlorine bleach (1 part bleach in 9 parts water, prepared daily).

Use an EPA-registered low-level disinfectant<sub>2</sub> (e.g., quaternary ammonium solution), 1:100 dilution of household chlorine bleach, or a general purpose cleaner to clean environmental surfaces and athletic equipment that is in contact with intact skin. Mats and other high-use equipment should be cleaned before and after each practice and several times a day throughout a wrestling tournament.

[http://www.idph.state.il.us/health/infect/MRSA\\_School\\_Recs.htm](http://www.idph.state.il.us/health/infect/MRSA_School_Recs.htm)

## **COMMUNITY & PHD - MRSA**

- England: Over-the-Counter Home Testing Kits.
  - Norway: Tests MRSA Contacts in Community.
- <http://www.cbsnews.com/stories/2009/12/23/tech/main6014559.shtml>

## **INCENTIVES - PUBLIC REPORTING**

- "State initiatives on public reporting of healthcare-associated infections play an important role in the Federal effort to prevent healthcare-associated infections."
- Don Wright, MD, MPH Deputy Assistant Secretary for Healthcare Quality, Office of the Assistant Secretary for Health, U.S. Department of Health and Human Services.

## **INCENTIVES - PUBLIC REPORTING**

"CDC does believe that increased transparency, public reporting of healthcare-associated infections is an important part of a comprehensive effort to prevent healthcare-associated infections and eliminate these infections ..." -- Dr. Srinivasan, Director of CDC's HAI prevention program.

Source: Media Telebriefing on State Healthcare-Associated Infection Data, May 27, 2010.

<http://www.cdc.gov/media/transcripts/2010/t100527.htm>

## **INCENTIVES - PUBLIC REPORTING**

### **WHY IT IS NEEDED**

Healthcare Industry Response Less Than Stellar. The following should be close to zero:

- Central Line Infections (Deep Blood Vessel Medication Tubes).
- Ventilator Associated Pneumonia (Lung Infection from Breathing Tubes).
- Heart Surgery Infections.

## **INCENTIVES - PUBLIC REPORTING**

### **WHY IT IS NEEDED**

CUSP (Comprehensive Unit-based Safety Program):

National effort to prevent central line-associated bloodstream infections (CLABSIs) and catheter-associated urinary tract infections (CAUTIs).

- In Aug. 2010, WKYT reported that 39 Kentucky Hospitals were participating in CUSP.  
<http://www.wkyt.com/news/headlines/101922173.html>
- In April 2011, AHRQ Reported that 33 Kentucky Hospitals were participating in CUSP.  
<http://www.ahrq.gov/qual/onthecusprpt/onthecusp.pdf>

## **HUMAN NATURE – WE DO BETTER**

Dr. Daniel Varga, Chief Medical Officer, St. Joseph Health System, has pointed out:

"You manage what is measured and you really manage what you measure and publically report."

Source: Testimony before House Health and Welfare Committee Feb. 10<sup>th</sup>, 2011

<http://www.healthwatchusa.org/HWUSA-Presentations-Testimony/20110210-KYHouse/varga/varga.htm>

## **SCHOOL SYSTEMS PUBLICLY REPORT**

- 1) In Kentucky, Standardized Test Results are Reportable by School Systems to the State and the Public.
- 2) In Kentucky, Hospital Acquired Conditions and Infections are Not Adequately Tracked or Made Public.

## **KY CDC GRANT**

- 1) Outbreaks are Reported

June 22, 2011: KY Using CDC Definition of Outbreak (Above a baseline).

If a hospital has baseline ongoing MRSA infections, the public needs to know.

- 2) Other definitions are used by other States

Illinois -- Clusters of MRSA infections (i.e., two or more laboratory-confirmed cases during a 14-day period) should be promptly reported to the local health department

[http://www.idph.state.il.us/health/infect/MRSA\\_School\\_Recs.htm](http://www.idph.state.il.us/health/infect/MRSA_School_Recs.htm)

## **NOT BURDENSOME**

- The Hospital Industry is profitable.
- It is the strongest sector in our economy.
- The so called "Burden" is small compared to the community benefit.

Lexington hospitals building to be the best – 2009 (Lexington Herald Leader, Dec. 13, 2009)

Norton Healthcare profits withstand recession .... (Courier Journal, Jun. 26, 2010)

Note: Norton is Very Profitable and 100% Transparent.

Summary of hospital finances available at: [www.ahd.com](http://www.ahd.com)

## STANDARDIZED & NOT DUPLICATIVE

The National Patient Safety Network is a Standardized Reporting System Run by the Centers of Disease Control and prevention.

## CDC - State Comparisons

## State KY - Health Dept. Initiatives & Public Reporting

## WHAT IS AN INFECTION ?

- Healthcare systems treat and bill patients for infections.
- Treatment Indications should be standardized, in order to do this, the Healthcare System has to know what an infection is.

## NON-PAYMENT FOR HAC

Only 18.8 million dollars have been recouped Nationwide by Medicare's non-payment for HAC policy between Oct. 2008 and Sept. 2009.

Department of Health and Human Services, Centers for Medicare & Medicaid Services. (2010B, Aug 16) Federal Register. 75(157),50096-50098.

[http://www.healthwatchusa.org/downloads/20100816-FY2011\\_Final\\_IPPS\\_rule\\_HACs.pdf](http://www.healthwatchusa.org/downloads/20100816-FY2011_Final_IPPS_rule_HACs.pdf)

## OVERALL REASON

- Kentuckians Have the Right to Know The MRSA Incidence in Their Facilities and Their Community.
- Kentuckians Overwhelmingly Want Data to Be Available to the Health Depts. (Poll: Senator Harper-Angle, Feb. 2010.)

Do you support requiring hospitals to report all hospital-acquired infections to the State Health Department?

## PUBLIC REPORTING

Doug Leonard, President of the Indiana Hospital Association, said the industry needs to "embrace transparency. Sometimes we don't like the results of that, but I think transparency is good for us and good for the public." -- Courier Journal, June 12, 2011

This presentation is the express opinion of Dr Kevin T. Kavanagh, MD, MS, FACS
